

Marking right - Safety flag

Make yourself easily visible at all times

A safety flag for vehicles is commonly used in numerous countries throughout the world.

The safety flag is designed to adhere to the roof of the vehicle by the aerodynamic structure of the flag base. We successfully prevented "flipping" of the vehicle's roof flag when traveling at 70/100 Km/h.

The flag comes with 3 or 6 magnets, at a capacity of 39 kg/cm² each.

The safety flag serves as identification for:

- Vehicles traveling in an operating area.
- Remote identification of vehicles.
- Identifying groups of vehicles traveling in a group and more.

Dimensions:

Flag base: 20/20 cm, weight: 400 g

Flag: glowing orange, 40/30 cm

Flagpole:

Material: Fiberglass

Diameter: ø6mm/Length 150cm/Weight 100g
